LEVELS

We have a house limit of 98dB(A) Leq15. This will be monitored by our staff during the performance and is not negotiable.

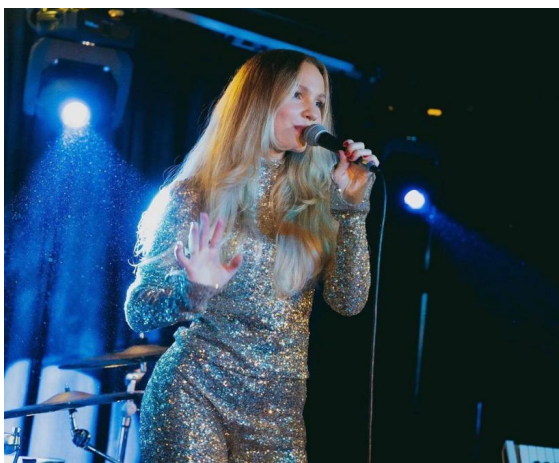

Our PA system is controlled by a remote computer running d&b's control software, R1. There is some narrow band attenuation in the bass and sub frequency ranges to reduce transmission and resonance both in the Studio and for the rest of the building. This is an important factor in the operation of our PA system and is the result of some considerable research and measurement. We are therefore unable to install or operate any other PA system without the appropriate testing and equalisation in place.

LIGHTING

A comprehensive lighting rig is provided, controlled by our touchscreen computer and Avolite Titan Mobile. This makes it easy to adjust the lighting for any type of show.

Our in-house technician will be available on show day to set up a basic wash for your show. Colours and light positions can be adjusted to meet your specifications. Our rig does not include pre-show programming. If you wish to have an additional design it may be necessary to arrange your own lighting technician and/or additional equipment.
